## Environmental Policy

lux-Airport, as the aerodrome operator of Luxembourg Airport, strives to minimise the impact of the airport's activity on the surrounding ecosystems and to develop infrastructures in harmony with the local communities, keeping in mind the protection of environment. Climate change is a reality and is everyone's responsibility: every step taken towards reducing greenhouse gas emissions counts. In line with this mission statement, lux-Airport is acting to increase its environmental performances by implementing an environment management system in its business strategy.

lux-Airport is seeking to continuously reduce the environmental impacts of its activities and operations, with a focus on the following topics:

### 1. Reducing our energy consumption of 25% by 2025

- Ongoing energy management strategy for the terminal: checks on existing facilities, adjustments and optimisations, investing in new technologies such as dimmable LED lighting in parking facilities.
- Improvement of the thermal envelope of buildings
- Renovation of heating systems

### 2. Reducing our Carbon footprint: net zero 2030 commitment

- Commitment to the Airport Carbon Accreditation programme in order to become neutral according to the level 3+ requirement by 2021
- Lean & Green certification: we achieved a 20% reduction in our carbon footprint in 2019 and aim 10% more in 2025.
- Mobility:
  - Developing the use of environmental friendly vehicles
  - Propose environmental friendly solutions for staff mobility
- We already buy only renewable electricity, 100 % hydroelectricity.
- We promote the production and the use of renewable energy to become net zero carbon neutral by 2030.

### 3. Water management:

- Continuous improving of wastewater treatment
- Recuperation of de-icing water to optimize their treatment
- Follow-up the groundwater quality by piezometer
- Further development of environmental emergency management procedures

## Environmental Policy

### 4. Waste management:

- Continuous reduction of waste production at the source
- Increase of the recycling rate
- Information and awareness-raising actions on the topic of waste sorting targeted at the staff
- Promoting re-usable items.
- Maintain the SuperDrecksKëscht label to ensure optimum management.

### 5. Soil conservation:

- A land use plan of the different zones will be drawn up, enabling the necessary anti-pollution measures to be taken with a view to guaranteeing a healthy environment and preventing contamination.
- Upon cessation of activity: soil analysis and restoration

### 6. Biodiversity:

- Improving the existing biodiversity through studies
- Promoting preservation by setting up projects:
  - Bee hives set up in cooperation with the ANA
  - Glyphosate is no longer used anywhere in the airport: thermal weeding in use.

### 7. Environmental awareness:

- Educating lux-Airport employees on the airport's specific environmental priorities.
- Carrying out environmental awareness campaigns aimed at passengers
- Encouraging the uptake of best practices among the airport's various stakeholders, e.g. airlines, handling, retail companies, etc.

lux-Airport ensuring that all new projects pass through a strong process of environmental impacts assessments and include studying of renewable energy.

The environmental management system integrates into the company's management practices, leading to continuous improvement, meeting legal and other requirements and thus providing the keys to greater success.
