

Luxembourg, 01/10/2025

As an attachment to the press release from 1st October - NAFF

ENG

Key Facts: New Fuel Farm at Luxembourg Airport

Construction Timeline: 34 months, including a 6-month commissioning phase (03/2028)

Budget: €85.7 million (index 924.32) + €20.8 million (index 1149.78)

Capacity: Up to six tanks, each with a capacity of 5,000 m³, for a total of 30,000 m³

Airport Autonomy: Expands current storage capacity by 275%, securing several days of operational autonomy

Fuel Compatibility: Supports multiple fuel types, including Sustainable Aviation Fuel (SAF) and military jet fuel F-34

Safety: Enhanced safety features incorporated throughout the facility

Accessibility: Strategically located, with direct highway connection, allowing for truck deliveries and easy maintenance

Design: State-of-the-art, meeting the most recent environmental and energy-saving standards

Operational Integration: Provides airside fuel delivery to apron hydrants, with initial capacity to service four cargo positions and flexibility for future expansion.
